

Mr. Richard Friedman  
DFS Flooring  
15651 Saticoy Street  
Van Nuys, CA 91406

Dear Mr. Friedman,

INVISTA, integrated manufacturer of performance polymers, intermediates and fibers, preferred method of cleaning carpets made of Antron® fiber is the use of ResisTech® 5. ResisTech® 5 Carpet Maintenance Treatment is a low moisture carpet care treatment that not only encapsulates soil, but also adds anti-soiling technology to the fibers.

**How does ResisTech® 5 work?**

- By surrounding and neutralizing oily soil particles with chemistry that inhibits the attraction of other soils, reducing the chance of carpet re-soiling
- Creates a “difficult-to-stick-to” surface, allowing soil to be easily removed by routine vacuuming
- Refortifies the fibers’ acid dye blockers, which help prevent staining

**What does this mean for you and your facility?**

- Keeps carpet looking better longer between hot water extraction cleanings
- Uses less water than hot water cleaning helping to reduce water consumption
- Formulated for reduced drying time due to low moisture technology as compared to hot water extraction

Please contact me at 1-877-5-ANTRON if you have any additional questions, or if I can be of service in some other way.

Sincerely,

Kieren Corcoran  
Sr. Director of Business Development, Commercial
